

Testing on live application

SESSION-1 Web, Desktops and Mobile Application Testing

1. Open the Flipkart website in your browser and test the main navigation bar — click each menu item (like Electronics, Fashion, Home, etc.) and verify that the URL changes correctly and the expected content loads.

Ans 1. **Electronics:** Click Electronics and verify that the URL changes and the page heading, categories, filters, and banners load correctly.

2. **Fashion:** Click Fashion and verify that the URL changes and clothing, footwear, and accessories are displayed.

3 **Home & Furniture:** Click Home & Furniture and verify that the URL changes and furniture and home décor products load correctly

4 **Beauty, Toys & More:** Click Beauty, Toys & More and verify that the URL changes and relevant products and promotional banners are displayed.

5. **Two Wheelers:** Click Two Wheelers and verify that the URL changes and bike and scooter categories are displayed.

2. Pick any sign-up or login form from a popular web app you use (like Zomato, Instagram, or Paytm) and test its field validation by entering invalid email addresses, leaving required fields blank, and submitting — note the error messages shown for each case.

Ans: Login Form Validation – Zomato

- Leaving the mobile number/email field blank and clicking Continue displayed a validation message for the required field.

- Entering an invalid email (e.g., kavita@, abd.com) showed **"Please enter a valid email address."**
- Entering an invalid mobile number (less than 10 digits or containing letters) showed **"Please enter a valid mobile number."**
- Entering an unregistered mobile number or email showed **"Account not found"** or prompted the user to sign up.

Login Form Validation – Instagram

- Leaving the email/username and password fields blank showed required field error messages.
- Entering an invalid email address (e.g., user@ or abc.com) showed **"Please enter a valid email address."**
- Entering a valid email and leaving the password field blank showed **"Please enter your password."**
- Entering an incorrect email/username or password showed "Invalid credentials" or **"Incorrect password."**

Login Form Validation – Paytm

- Leaving the mobile number/email field blank displayed **a required field error message.**
- Entering an invalid mobile number displayed **"Please enter a valid mobile number."**
- Entering an invalid email address displayed **"Please enter a valid email address."**
- Entering an unregistered mobile number or email displayed **"Account not found."**
- Entering an incorrect OTP displayed **"Invalid OTP. Please try again."**

3. Install the Notepad++ desktop application on your Windows machine, then test if the installer correctly creates a Start Menu shortcut and check if you can save a text file to your Documents folder.

Ans: Installation Testing - Notepad++

Step 1: Install Notepad++

1. Download the Notepad++ installer from the official website.
2. Run the installer.
3. Accept the license agreement.
4. Complete the installation using the

Step 2: Verify Start Menu Shortcut

1. Click the Start menu.
2. Search for Notepad++.

Step 3: Verify Saving a File

1. Open Notepad++ from the Start Menu.
2. Type any sample text (e.g., "Installation testing completed").
3. Click File → Save As.
4. Select the Documents folder.
5. Enter a file name (e.g., TestFile.txt).
6. Click Save.

4. Download and install the 'Spotify Lite' APK on an Android emulator (like BlueStacks or Android Studio emulator), then verify that the app launches, the login screen appears, and the UI elements (logo, fields, buttons) are properly displayed on your mobile screen.

**

Hint: If you don't have a real device, use any free Android emulator and a safe APK download source.**

Ans: Installation and UI - Spotify Lite

Step1: Install an Android Emulator

1. Install an Android emulator: BlueStacks
Android Studio
2. Launch the emulator and complete the initial setup.
3. The emulator should start successfully and display the android home screen.

Step 2: Download and Install Spotify Lite APK

1. Download the Spotify Lite APK from a trusted source.
2. Open the APK file in the emulator.
3. Click Install and wait for the installation to complete.
4. Spotify Lite should install successfully without any errors.

Step 3: Launch the Application

1. Open Spotify Lite from the emulator's app drawer.
2. Wait for the application to load.
3. The application should launch successfully without crashing.

Step 4: Verify the Login Screen

1. Observe the first screen displayed after launching the app.
2. The login screen should appear with options such as Log In and Sign Up.

Step 5: Verify UI Elements

1. Spotify Lite logo
2. Email/username field
3. Password field

4. Log In button
5. Sign Up option
6. Text and icons are aligned properly
7. No overlapping, cropped, or distorted elements are visible
8. All UI elements should be visible, properly aligned, and responsive to touch interactions.

5. Test the window handling of the Windows Calculator app by opening multiple instances (if possible), switching between them, and checking if calculations in one window affect the others.

Ans: Window Handling Testing – Windows Calculator

Step 1: Open Multiple Calculator Windows

1. Open the Windows Calculator application.
2. Open a second instance of Calculator (if supported) by launching the app again.
3. Repeat the process to open additional windows if possible.
4. Multiple Calculator windows should open successfully.

Step 2: Switch Between Windows

1. Use Alt + Tab or click on the taskbar icons to switch between Calculator windows.
2. Verify that each window is accessible independently.
3. Users should be able to switch between Calculator windows without any issues.

Step 3: Perform Calculations

1. In the first Calculator window, perform a calculation (Example: $20+30=50$)
2. Switch to the second Calculator window.
3. Perform a different calculation (Example: $100 - 30 = 70$).
4. Each window should maintain its own calculation history and results independently.

Step 4: Verify Data Isolation

1. Switch back to the first Calculator window.
2. Check whether the previous calculation result is still displayed.
3. Confirm that calculations from one window do not appear in other windows.
4. Calculations performed in one window should not affect any other Calculator window.
