

Software Testing Assignment

Module-1(Fundamental)

Q.1 What is SDLC

Ans: SDLC (Software Development Life Cycle) is a structured process used by developers to design, develop, test, and maintain software in a systematic way.

Q.2 What is software testing?

Ans: Software testing is the process used to identify the correctness. Completeness, and quality of developed computer software.

Q.3 What is agile methodology?

Ans: Agile methodology is a way of developing software step by step, in small part, instead of doing everything at once.

Q.4 What is SRS

Ans: SRS (Software Requirements Specification) is a document that describe what a software system should do and how it should work.

Q.5 What is oops

Ans: OOPS (Object -Oriented Programming System) is a programming concept used to organize code using object and classes.

Q.6 Write basic concepts oops

Ans: Basic Concepts of OOPS (Object-Oriented Programming System)

1. Class

A blueprint or template used to create objects.

2. Object

A real instance of a class.

3. Encapsulation

Wrapping data and methods together and hiding details.

4. Inheritance

One class can use the properties and methods of another class.

5. Polymorphism

Same method can behave differently in different situations.

6. Abstraction

Showing only essential features and hiding complexity.

Q.7 What is object

Ans: An object is an instance of a class in OOPS. it represent a real-world entity and contains data and behaviour.

Q.8 What is class

Ans: a class is a blueprint template used to create object.it defines the properties(data) and methods(functions) of object.

Q.9 What is encapsulation

Ans: Encapsulation means wrapping data and method into one unit and hiding details.

Q.10 What is inheritance

Ans: Inheritance means one class can use properties and methods of another class.

Q.11 What is polymorphism

Ans: Polymorphism means one method can behave differently in different situations.

Example: same function, different output.

Q.12 Draw Usecase on online bill payment system (Paytm)

Ans:

Q.13 Draw Usecase on banking system for customers.

Ans:

Q.14 Draw Usecase on broadcasting system.

Ans:

Q.15 Write SDLC phases with basic introduction

Ans: 1. Requirement Gathering and Analysis - collect user needs

2. Designing - plan system structure

3. Implementation - coding

4. Testing – check error

5. Deployment – release software

6. Maintenance - fix and update

Q.16 Explain phases of the waterfall model

Ans: 1. Requirement- Collect and understand what the user need from the software.

2. Implementation - Write code and develop the software.

3. Design – Plan system structure, database, and interface.

4. Testing – Check software for bugs and fix errors.

5. Deployment – Release the software for users.

6. Maintenance – Update and fix the software after release.

Q.17 Write phases of spiral model

Ans: 1. Planning - Define objectives, requirement, and project plan.

2. Risk Analysis- Identify and analyze risks, and find solutions.

3. Engineering- Develop and test the software.

4. Evaluation -Customer reviews the work and gives feedback.

Q.18 Write agile manifesto principles

Ans:

Customer Satisfaction (early & continuous delivery)

Welcome Changes (even late in development)

Deliver Working Software (frequently)

Collaboration (developers & customers daily)

Motivated Individuals (give support & trust)

Face -to -Face Communication (best way to share ideas)

Working Software (main measure of progress)

Sustainable Pace (avoid burnout)

Good Design & Simplicity (keep it simple)

Self – Organizing Teams (best results)

Continuous Improvement (review & adapt regularly)

Q.19 Explain working methodology of agile model and also write pros and cons.

Methodology of Agile Model

Ans: 1. Planning – decide features to build (backlog selection)

2.Design – simple design for that feature

3. Development – coding is done

4. Testing – check for errors

5. Review – show work to customer and take feedback

6. Release – deliver working part of software

Pros of Agile Model

- 1.Flexible to changes
- 2.Fast delivery of features
- 3.Continuous feedback from users
- 4.Better quality due to regular testing
- 5.Customer involvement is high

Cons of Agile Model

- 1.Less documentation
- 2.Requires skilled and experienced team
- 3.Difficult to manage large projects
- 4.Time and cost estimation can be unclear

Q.20 Draw usecase on OOT platfrom.

Q.21 Draw usecase on E-commerce application

Ans:

Q.22 Draw usecase on Online shopping product using payment gateway.

Ans:
