
Automation and Selenium

SESSION 10 – REPORTING, LOGS & DEBUGGING

1. Open Selenium IDE and record a test that searches for a product on Flipkart, then generate and save the summary test report from the IDE after execution.

Ans:

Aim: To record a product search test on Flipkart and generate a test report.

Steps:

1. Open Selenium IDE.
2. Create a new project.
3. Open <https://www.flipkart.com>.
4. Search for **Bluetooth Headphones**.
5. Execute the test.
6. After execution, generate and save the **Summary Test Report**.

Expected Result:

The test executes successfully, and the summary report is generated and saved.

Actual Result:

The test completed successfully, and the summary report was saved.

Status: PASS

2. Manually capture a screenshot of a failed test step while automating a Zomato restaurant search scenario using Selenium IDE, and save the screenshot with a clear filename indicating the failed step.

Ans:

Aim: To capture a screenshot of a failed test step.

Steps:

1. Run the Zomato restaurant search test.
2. When the test fails, pause execution.
3. Capture a screenshot manually using the Snipping Tool or Print Screen.
4. Save the screenshot with a meaningful name.

Screenshot File Name:

Zomato_Search_Failed_Step.png

Expected Result:

The screenshot is saved with a clear and meaningful filename.

Actual Result:

The screenshot was captured and saved successfully.

Status: PASS

3. Use Selenium IDE's built-in command to automatically take a screenshot after adding an item to the cart in a Myntra shopping flow, then verify that the screenshot is saved in the correct location.

Ans:

Aim: To automatically capture a screenshot after adding a product to the cart.

Steps:

1. Open the Myntra website.
2. Search for a product.
3. Open the product page.
4. Add the product to the cart.
5. Use the **capture screenshot** command.
6. Verify that the screenshot is saved in the selected folder.

Expected Result:

The screenshot is captured automatically and saved successfully.

Actual Result:

The screenshot was captured and saved in the specified location.

Status: PASS

4. Given a test case that fails when searching for a movie on BookMyShow using Selenium IDE, use the IDE's debugging tools to identify the step causing the failure and write a short explanation of how you fixed it.

Ans:

Aim: To identify and fix the failed step using Selenium IDE debugging tools.

Steps:

1. Open the BookMyShow test in Selenium IDE.
2. Add a breakpoint before the movie search step.
3. Run the test in **Step-by-Step** mode.
4. Identify the step where the test fails.
5. Correct the locator and add a wait before the search action.
6. Run the test again to verify the fix.

Problem Identified:

The movie search box loaded slowly, causing Selenium IDE to fail before the element became available.

Fix Applied:

Added a **Wait for Element Visible** command before entering the movie name and updated the locator.

Expected Result:

The movie search completes successfully without any errors.

Actual Result:

The test passed successfully after applying the fix.

Status: PASS
