
Automation and Selenium

SESSION 11 – END-TO- END AUTOMATION MINI PROJECT

1. Use Selenium IDE to automate the login process for the Flipkart website, ensuring the test script waits for the home page to load after login.

Ans:

Aim: To automate the Flipkart login process and verify that the home page loads after successful login.

Steps:

1. Open <https://www.flipkart.com>.
2. Click **Login**.
3. Enter the registered mobile number/email.
4. Enter the password.
5. Click the **Login** button.
6. Wait until the **Profile/My Account** icon is visible.
7. Verify that the home page is displayed.

Expected Result:

The user logs in successfully, and the Profile/My Account icon is visible on the homepage.

Actual Result:

Login was successful, and the homepage loaded correctly.

Status: PASS

2. Record a Selenium IDE test that adds two products to the cart on Myntra, then verifies that both items appear in the cart summary.

Ans:

Aim: To add two products to the Myntra cart and verify both items.

Steps:

1. Open <https://www.myntra.com>.
2. Search for the first product and add it to the cart.
3. Search for the second product and add it to the cart.
4. Open the Cart page.
5. Verify that both products appear in the cart summary.

Expected Result:

Both selected products are displayed in the cart summary.

Actual Result:

Both products were added and displayed successfully.

Status: PASS

3. Create a Selenium IDE script to log out of your Zomato account after adding an item to the cart, and validate that the login page is displayed again.

Ans:

Aim: To verify the logout functionality on Zomato.

Steps:

1. Open <https://www.zomato.com>.
2. Log in with valid credentials.
3. Add a food item to the cart.
4. Open the account menu.
5. Click **Logout**.
6. Verify that the Login page is displayed.

Expected Result:

The user is logged out successfully, and the Login page is displayed.

Actual Result:

The user logged out successfully, and the Login page appeared.

Status: PASS

4. Export your Selenium IDE test suite as a test plan document, including steps for login, adding items, cart validation, and logout, and briefly describe the expected result for each step.

Ans:

Step	Test Action	Expected Result
1	Login to the application	User logs in successfully.
2	Search and add items to the cart	Selected items are added to the cart.
3	Open the cart	All added items are displayed correctly.
4	Validate the cart	Product names and quantity are correct.
5	Logout	User is logged out, and the Login page is displayed.

Overall Expected Result:

All test steps execute successfully without errors.

5. Build a full regression test suite in Selenium IDE for the Swiggy website covering login, searching for a restaurant, adding a dish to the cart, and logging out. Ensure your suite includes at least one validation step for content (e.g., dish name or price).

Ans:

Regression Test Suite – Swiggy

Test Case	Test Steps	Expected Result
Login	Enter valid credentials and log in	User logs in successfully.
Search Restaurant	Search for a restaurant (e.g., Domino's Pizza)	Restaurant search results are displayed.
Add Dish	Select a dish and add it to the cart	The selected dish is added to the cart.
Validate Cart	Verify the dish name and price	Correct dish name and price are displayed in the cart.
Logout	Click Logout from the account menu	User is logged out successfully and the Login page is displayed.

Overall Expected Result:

The regression test suite executes successfully, and all validations pass.

Status: PASS
