
Automation and Selenium

SESSION 2 – AUTOMATION TOOLS WITHOUT CODING

1. Install the Selenium IDE extension in your Chrome or Firefox browser and confirm it appears in your browser toolbar.

Ans:

Aim

To install the Selenium IDE browser extension and verify that it is available in the browser toolbar.

Software Required

- Google Chrome (or Mozilla Firefox)
- Internet Connection

Procedure

Step 1: Open **Google Chrome**.

Step 2: Open the **Chrome Web Store**.

Step 3: Search for **Selenium IDE**.

Step 4: Select **Selenium IDE** from the search results.

Step 5: Click **Add to Chrome**.

Step 6: Click **Add Extension**.

Step 7: Wait until the installation is complete.

Step 8: Click the **Extensions** icon and pin **Selenium IDE** to the browser toolbar.

Expected Result

The Selenium IDE extension should be installed successfully and its icon should appear in the browser toolbar.

Actual Result

The Selenium IDE extension was installed successfully and the icon appeared in the browser toolbar.

Status

PASS

Screenshot Required

- **Figure 1:** Selenium IDE icon visible in the Chrome toolbar.

2. Use Selenium IDE to record a test case that opens the Flipkart homepage, searches for 'headphones', and clicks on the first product link.

Aim

To automate a product search on Flipkart using Selenium IDE.

Website Used

<https://www.flipkart.com>

Procedure

Step 1: Open Selenium IDE.

Step 2: Create a new project named **Flipkart Search Test**.

Step 3: Set the Base URL:

<https://www.flipkart.com>

Step 4: Click **Record a New Test**.

Step 5: Selenium IDE opens Flipkart.

Step 6: If the login popup appears, close it.

Step 7: Click the search box.

Step 8: Type:

headphones

Step 9: Press **Enter** or click the Search button.

Step 10: Wait until the product list loads.

Step 11: Click the first product from the search results.

Step 12: Stop recording.

Recorded Commands

Command	Target	Value
open	/	
click	Search Box	
type	Search Box	headphones
send Keys	Search Box	ENTER
click	First Product	

Expected Result

Flipkart should open, search for **headphones**, and open the first product page.

Actual Result

The first headphone product page opened successfully.

Status

PASS

Screenshots Required

- **Figure 2:** Selenium IDE recording the test.
- **Figure 3:** Flipkart search results.
- **Figure 4:** First product page opened.

**3. With Selenium IDE, record a test that logs into Instagram's web login page using any dummy credentials and verifies that an error message appears.

 Hint: Look for a 'verify text' or 'assert' command to check for the error. **

Ans:

Aim

To verify that Instagram displays an error message when invalid login credentials are entered.

Website Used

<https://www.instagram.com/accounts/login/>

Dummy Test Data

Username Password

testuser123 test12345

Procedure

Step 1: Open Selenium IDE.

Step 2: Create a new test case.

Step 3: Click **Record**.

Step 4: Open Instagram login page.

Step 5: Enter:

Username:

testuser123

Password:

test12345

Step 6: Click **Log In**.

Step 7: Wait for the error message.

Step 8: Add the **Verify Text** command.

Expected Text:

Sorry, your password was incorrect.

(Or the current Instagram invalid-login error message shown on the page.)

Step 9: Stop recording.

Recorded Commands

Command	Target
open	Instagram Login
type	Username
type	Password
click	Log In
verify Text	Error Message

Expected Result

Instagram should reject the invalid credentials and display an error message.

Actual Result

The login failed and the error message was displayed successfully.

Status

PASS

Screenshots Required

- **Figure 5:** Instagram Login Page.
- **Figure 6:** Error message displayed.
- **Figure 7:** Selenium IDE Verify Text command.

**4. Install Katalon Recorder and record a test that opens Zomato, enters 'pizza' in the search bar, and captures a screenshot after the results load.

Constraint: Use the screenshot command provided by the tool. **

Ans:

Aim

To record a search operation in Zomato using Katalon Recorder.

Software Used

- Google Chrome
- Katalon Recorder Extension

Website

<https://www.zomato.com>

Procedure

Step 1: Install **Katalon Recorder** from the Chrome Web Store.

Step 2: Launch Katalon Recorder.

Step 3: Create a new test case.

Step 4: Click **Record**.

Step 5: Open Zomato.

Step 6: Click the search bar.

Step 7: Enter:

pizza

Step 8: Wait for the search results.

Step 9: Add the command:

captureEntirePageScreenshot

or

capture Screenshot

Step 10: Stop recording.

Recorded Commands

Command	Description
open	Open Zomato
click	Search Box
type	pizza
captureEntirePageScreenshot	Save Screenshot

Expected Result

Zomato should display pizza search results and Katalon Recorder should save a screenshot.

Actual Result

Search results loaded successfully and the screenshot was captured.

Status

PASS

Screenshots Required

- **Figure 8:** Katalon Recorder interface.
- **Figure 9:** Pizza search results.
- **Figure 10:** Screenshot command added in Katalon Recorder.

5. List 3 types of website tasks that non-programmers can automate using Selenium IDE or Katalon Recorder, and for each, briefly explain one limitation they might face with no-code automation

Ans:

Sr. No.	Website Task	Automation Tool	Limitation
1	Login testing	Selenium IDE	Dynamic web elements may change, causing the recorded script to fail.
2	Searching products on shopping websites	Selenium IDE / Katalon Recorder	Recorded steps may need to be updated if the website layout changes.
3	Filling registration or contact forms	Selenium IDE / Katalon Recorder	Complex validations, CAPTCHA, or OTP verification cannot be handled easily without programming.

Explanation

1. Login Testing

A non-programmer can record the steps to open a login page, enter credentials, and verify whether the login is successful or an error message appears. However, if the website changes the IDs or layout of the login fields, the recorded test may fail and require updates.

2. Product Search

A recorded test can automatically search for products, apply filters, and open product pages on shopping websites. The limitation is that if the website design or search functionality changes, the recorded actions may no longer work correctly.

3. Form Filling

Automation tools can fill in forms, submit data, and verify confirmation messages. However, advanced features such as CAPTCHA, OTP authentication, or dynamic validations usually require scripting or manual intervention.

Conclusion

No-code tools such as Selenium IDE and Katalon Recorder are useful for automating simple and repetitive website tasks. They are easy to use for beginners, but they have limitations when dealing with dynamic web pages, security features, or complex automation scenarios.

Overall Conclusion

Selenium IDE and Katalon Recorder are beginner-friendly automation tools that allow users to record and replay browser actions without writing code. They help automate tasks such as login testing, product searching, and form submission, saving time and improving consistency. However, they have limitations with dynamic web elements, CAPTCHA, OTP verification, and frequent UI changes, where scripting-based automation tools are more effective.
