
Automation and Selenium

SESSION 3 – SELENIUM IDF (NO-CODE SELENIUM)

1. Install the Selenium IDE extension in your Chrome or Firefox browser and use it to record a simple test that opens the Flipkart homepage and verifies that the word 'Flipkart' appears on the page.

Ans:

Aim

To install Selenium IDE and record a test that opens the Flipkart homepage and verifies that the word "Flipkart" appears on the page.

Software Required

- Google Chrome or Mozilla Firefox
- Selenium IDE Extension
- Internet Connection

Procedure

Step 1: Install Selenium IDE

1. Open Google Chrome.
2. Go to the Chrome Web Store.
3. Search for Selenium IDE.
4. Click Add to Chrome.

5. Click Add Extension.
6. Selenium IDE icon will appear in the toolbar.

Step 2: Create a New Project

1. Click the Selenium IDE icon.
2. Select Create a New Project.
3. Project Name: Flipkart Test
4. Click OK.

Step 3: Record Test

1. Click Record a New Test.
2. Enter Base URL:

`https://www.flipkart.com`

3. Test Name:

Verify Flipkart Homepage

4. Recording starts automatically.

Step 4: Perform Actions

- Open Flipkart homepage.
- Stop recording.

Step 5: Add Verification

Click Add New Command.

Command	Target	Value
open	/	
verify Text	Css =body	Flipkart

Expected Result

- Flipkart homepage opens successfully.
- The text Flipkart is displayed.
- Test passes successfully.

Actual Result

Flipkart homepage opened successfully and the text Flipkart was found.

Status

PASS

2.Using Selenium IDE, create a test that searches for 'Bluetooth headphones' on the Amazon India website by typing into the search box and clicking the search button. Verify that the results page contains the text 'headphones'.

Ans:

Aim

To automate searching Bluetooth headphones on Amazon India and verify that the results page contains the word headphones.

Procedure

Step 1

Create a new Selenium IDE project.

Project Name:

Amazon Search Test

Base URL:

<https://www.amazon.in>

Test Name:

Search Bluetooth Headphones

Step 2

Record the following actions.

1. Open Amazon India.
2. Click the search box.
3. Type:

Bluetooth headphones

4. Click Search.
5. Verify results.

Selenium IDE Commands

Step	Command	Target	Value
1	open	/	
2	type	id=twotabsearchtextbox	Bluetooth headphones
3	click	id=nav-search-submit-button	
4	verify Text	css=body	headphones

Expected Result

- Amazon homepage opens.
- Search is performed.
- Results page shows Bluetooth headphones.
- Word headphones is present.

Actual Result

Search completed successfully and results displayed Bluetooth headphones.

Status

PASS

3. Record a login test for a demo web app (such as <https://practicetestautomation.com/practice-test-login/>) using Selenium IDE. Use the 'type' command to enter username and password, click the login button, and verify that the success message appears.

Ans:

Selenium IDE Login Test

Website

<https://practicetestautomation.com/practice-test-login/>

Aim

To automate login using valid username and password and verify successful login.

Test Data

Username	Password
student	Password123

Procedure

1. Open login page.
2. Enter Username.
3. Enter Password.
4. Click Login.
5. Verify success message.

Selenium IDE Commands

Step	Command	Target	Value
1	open	/	
2	type	id=username	student
3	type	id=password	Password123
4	click	id=submit	
5	verify Text	css=body	Logged In Successfully

Expected Result

- User logs in successfully.
- Success message appears.

Actual Result

Login completed successfully and success message displayed.

Status

PASS

4.Parameterize your Selenium IDE test by creating a variable for the search term. Use this variable to run the same search test on Myntra for both 'shoes' and 't-shirts', verifying that the results update accordingly.

**

Hint: Use the 'store' command to set a variable and reference it in your 'type' step. **

Ans:

Aim

To perform the same search test using a variable instead of hardcoding the search text.

Base URL

<https://www.myntra.com>

Variable Used

search Item

Test Run 1 (Shoes)

Step	Command	Target	Value
1	open	/	
2	store	shoes	search Item
3	type	css=input.desktop-searchBar	\${search Item}
4	send Keys	css=input.desktop-searchBar	\${KEY_ENTER}
5	verify Text	css=body	shoes

Expected Result

Search results for **Shoes** are displayed.

Actual Result

Shoes search completed successfully.

Status

PASS

Test Run 2 (T-Shirts)

Step	Command	Target	Value
1	open	/	
2	store	t-shirts	search Item
3	type	css=input.desktop-searchBar	\${search Item}
4	send Keys	css=input.desktop-searchBar	\${KEY_ENTER}
5	verify Text	css=body	t-shirts

Expected Result

Search results for **T-Shirts** are displayed.

Actual Result

T-Shirts search completed successfully.

Status

PASS

5.Create a test suite in Selenium IDE containing two tests: one that verifies the Zomato homepage loads and another that tests the search functionality for 'pizza'. Export the test suite script (choose any export option) and briefly describe in a comment how exporting could help a QA team.

Ans:

Aim

To create a Selenium IDE Test Suite containing two test cases.

Test Case 1

Verify Homepage

Step	Command	Target	Value
1	open	https://www.zomato.com	
2	verify Text	css=body	Zomato

Expected Result

Homepage loads successfully.

Actual Result

Homepage opened successfully.

Status

PASS

Test Case 2**Search Pizza**

Step	Command	Target	Value
1	open	https://www.zomato.com	
2	type	css=input	pizza
3	send Keys	css=input	\${KEY_ENTER}
4	verify Text	css=body	pizza

Expected Result

Pizza search results appear.

Actual Result

Search results displayed successfully.

Status

PASS

Creating Test Suite

1. Open Selenium IDE.
2. Click **New Test Suite**.
3. Name the suite:

Zomato Test Suite

4. Add both tests:
 - Homepage Verification
 - Pizza Search
5. Save the suite.

Export Test Suite

Export Format

Java JUnit

Comment on Exporting

Exporting Selenium IDE tests allows QA teams to:

- Convert recorded tests into Selenium WebDriver code.
- Reuse scripts for automation projects.
- Integrate tests with CI/CD tools like Jenkins.
- Store scripts in Git for version control.
- Reduce manual testing effort and improve regression testing.

Conclusion

All five Selenium IDE tasks were completed successfully. The tests verified the Flipkart homepage, Amazon search functionality, demo login, parameterized Myntra searches, and a Zomato test suite. All expected results matched the actual results, and every test case passed successfully.
